1.PRODUCT DESCRIPTION-PRECAUTIONARY NOTES

The DSP is a digital signal processor essential to maximize the acoustic performance of your car audio system. It consists of a 32-bit DSP processor and 24-bit AD and DA converters. It can connect to any factory system, even in vehicles featuring an integrated audio processor, since, thanks to the De-equalization function, the DSP will send back a linear signal. It features selectable High and low level inputs as well as 3.5MM Aux and digital inputs that feed 8 completely variable output channels. Each output channel has a 31-band equalizer available. It also features a 66-frequency electronic crossover as well as BUTTERWORTH or LINKWITZ filters with 6-24dB slopes and a digital time delay line. The user can select adjustments. That allows him or her to interact with the DSP through a remote control device called DRC.

WARNING: 1-a PC provided with Windows XP, Windows Vista or Windows 7 operating system, 1.5GHz minimum. Processor speed, 1 GB RAM minimum memory and a graphics card with a minimum resolution. Of 1024x600 pixels are required to install the software and set up the DSP. 2-Before connecting your DSP, carefully read this manual. Improper connections may cause damage to the DSP or to the speakers in the car audio system.

How to install

WARNING: do not use aggressive cleaning agents or abrasive cloth to clean the display. Simply use a soft cotton cloth lightly damped with water.

4.CONNECTION PANELS-DESCRIPTION

4.1 Input signals

1. INPUTS;FR-FL-RR-RL,SUB R-SUB L inputs(SPEAKERS)

The DSP comes with 6 HI-LEVEL signal inputs to connect amplified signal cables coming from the main Analog source. input sensitivity is adjustable from 2 to 15V RMS.

Remark: if a low-level output source (PRE OUT) with output signal equal or greater than 2 VRMS is available, you can Connect it to the high-level MASTER input(SPEAKERS). Sensitivity is increased by adjusting the IN LEVEL controls.

4.2 USB signals

USB(type B)connection plug, to connect the processor to a PC and manage its functions through the DSP 3 Software. The connection standard is USB 1.1/2.0 compatible.

4.3 Input - remote control outputs and power supply

1. POWER SUPPLY.

+12V:Positive connection terminal for car 12V power supply.

GND:Power supply negative connection terminal(GND).

WARNING:make sure the connection polarity is as indicated on the terminals.A misconnection.

May result in damage to the DSP. After applying power,wait at least 10 seconds

Before turning the DSP on.

2. REMOTE IN-OUT.

REM IN:input to turn on the processor remotely along with the audio signal remote Out.

REM OUT:output to turn on other devices/amplifiers connected after the processor.

From the REMOTE-IN signal, the processor only takes 1second to supply the signal to the REM OUT output. The 130-mA output current capability can also drive an automotive relay (Making sure it does not exceed 130 mA).

5.CONNECTIONS

5.1 Power supply and remote turn on

WARNING:to power the device,use 1 mm²(16 AWG) cables.

Remark: the DSP is internally protected by a Fuse-resistor soldered on its printed circuit board
To replace it contact a service center. Using an External fuse is recommended, though it is not required.

5.2 Personal computer and Digital Remote Control(DRC)

5.3 High-Level input signals

1.SPEAKERS IN HI-LEVEL STEREO FRONT+REAR+SUBWOOFER .

AMPLIFIED RADIO DECK

5.5 Output signals

Output to an amplifier is system .

5.5 Low-Level ,BLUETOOTH input signals

AUX IN L/R: Auxiliary analog stereo signal .
Sensitivity is adjustable from 0.6 to 5V RMS .

BlueTooth IN :
Insert the Bluetooth control module into the DSP .
turn on your mobile phone and find the Bluetooth control mode .
Click on the Bluetooth . When the control mode is automatically
Paired successful . Then you can play the music .
DO NOT INSERT THE USB.
